PROFILE

Data scientist and analyst with an MSc in Data Science (Distinction) and approximately one year of commercial data experience. Led data preparation and early-warning-score research for a four-person NHS-linked dissertation using 526,805 paediatric emergency visits. At Learning Finch, developed an enquiry-tracking workflow that reduced manual review from hours to minutes as enrolment conversion increased about threefold during its use.

SKILLS

Analysis: SQL, Python (pandas, NumPy, scikit-learn), Excel, statistics, exploratory data analysis (EDA)

BI & visualisation: Power BI (DAX), Looker Studio, Tableau, Streamlit, Matplotlib, Seaborn

Methods: Data cleaning & validation, RFM segmentation, K-Means, Random Forest, logistic regression, XGBoost, model validation

Workflow: Git & GitHub, Jupyter, dbt, Excel VBA, Pytest, CI/CD

Additional technical skills: PyTorch, NLP, RAG evaluation, ETL, pseudonymisation, OCR

PROFESSIONAL EXPERIENCE

Junior Data Analyst | Learning Finch, India | Feb 2024 - Jan 2025

- Built an enquiry-tracking workflow with 14+ day inactivity alerts and 1 to 2 day follow-up. Review time fell from hours to minutes; enquiry-to-enrolment conversion rose about 3x during use.
- Prepared reporting data with SQL and maintained Power BI and Tableau KPI dashboards. Weekly enquiries grew from roughly 2 to 5 to around 10 over ten months.
- Created Python OCR for shipment IDs and RoBERTa/TextBlob sentiment pipelines; added automated tests and CI/CD for Python submission grading.

Operations Executive | Econship, India | Nov 2023 - Jan 2024

- Handled 100+ container release orders daily and monitored 100 to 400 containers across four port terminals in time-sensitive operations.

SELECTED DATA PROJECTS

Paediatric Emergency Department Analytics Platform | UHL NHS Trust and University of Leicester | 2025 - 2026

- As group lead, led data ingestion, validation and pseudonymisation for 526,805 paediatric ED visits. Helped deliver a Streamlit and Power BI platform with 78 visualisations and a data-quality workflow.
- Owned the POPS versus NPEWS scoring comparison across 50,928 comparable observations. About 38% of POPS mid-range observations were placed in the NPEWS Low band under the project's interim comparison method.
- The team highlighted 7,505 high-EWS visits without admission, including 257 at the resuscitation-consideration threshold, as signals for clinical review rather than evidence of harm.

BrailleVision | OpenAI x Rotary India Hackathon | Vision-language AI

- Built a browser-based tool that reads photographed Braille, returns English text with confidence scoring and speaks the result aloud.

RAG Hallucination Detection Research | Zenodo preprint | 2026

- Compared claim-level checks with a single-prompt LLM judge and documented failure modes in claim extraction and evaluation.

EDUCATION AND RECOGNITION

MSc Data Science (Distinction) | University of Leicester, UK | Awarded Nov 2026

BEng Mechanical Engineering | University of Mumbai, India | 2018 - 2022 | CGPA 8.11/10

Recognition: Smart India Hackathon 2022 National Runner-Up; Databricks Fundamentals Accreditation (2026).
